

5.5 - Graphs of Relations and Functions

5.5 - Graphs of Relations and Functions

Monday, November 27, 2017 9:33 AM

How to tell if a graph is a function?

↳ Vertical line test:

If you can draw a vertical line that intersects the graph more than once, it is not a function.

On a graph:

A function is when associated with only one y

Ex: Function or not?

$(3, 8) R: y \geq 2$

2

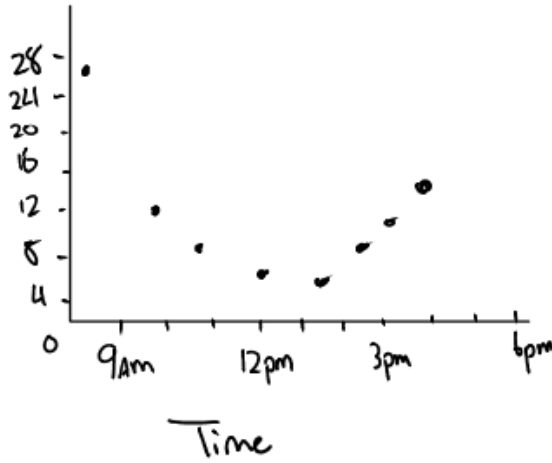

$D: -2$

$R: 0 \leq$

Ex:

Number of boats

(i) What is the independent variable?

(ii) What is the dependent variable?

(iii) Why are points connected?

(iv) $D \neq R$?

Ex. $f(x) = -3x + 7$

What is the range when the domain is $\{ \}$?

What's the domain when the range is 4?

$$(x, 4)$$

$$\Rightarrow 4 = -3x + 7$$

$$-3 = -3x$$

$$1 = x$$

HW: Pg. 294 # 4, 5, 7, 8, 9, 16, 17, 19
